Summary

Dr. Bert Green is Professor Emeritus at the Johns Hopkins University, in the Department of Psychology. Dr. Green is a measurement and psychometric expert who contributed to several areas of statistical science, including Item Response Theory (IRT). He has made numerous contributions in the areas of measurement, human factors research, and multivariate statistics during his 55-year career. He was an integral part of the research team that developed and validated both the adolescent and child/parent versions of the Child Health and Illness Profile (CHIP).

Dr. Green received his Ph. D. degree from Princeton in 1951, where he held a fellowship from the Educational Testing Service. He was on the faculty at M.I.T. and, later the Carnegie Mellon University. In 1969 he became a Professor in the Department of Psychology at the Johns Hopkins University. He was recently a member of a national committee that revised the American Psychological Association's Standards for Educational and Psychological Testing. His recent research concerns test theory and computer-based adaptive testing.

The recipient of many honors, he has recently received an award from Division 5 of the American Psychological Association for Lifetime Contributions to Evaluation, Measurement and Statistics; a Career Achievement Award in Computer-based Testing from the Association of Test Publishers; and the Maryland State Psychological Association's award for outstanding scientific contributions to psychology. He has published over 100 scientific articles in peer-reviewed professional journals.

He continues many of his faculty activities and advises the CHIP team on an ad-hoc basis.
